The Pan China University Students Green Exchange, co-organized by The Conservancy Association and The University of Hong Kong, was successfully concluded on 24 July. The nearly 60 participants from Beijing, Shanghai, Taipei and Hong Kong not only had a better grasp of the current environmental issues, but a deeper reflection on different ways to solve them and how cultural differences affect the decision making process.

The Sharing centered on two themes: Corporate Social Responsibility and Global Warming. CA arranged seminars and site visits to familiarize the participants with the concept. For the topic of global warming, we hoped that the participants could contemplate the problem from different angles; therefore we invited representatives from the Hong Kong Observatory, Electrical and Mechanical Services Department and Kadoorie Farm and Botanic Garden to talk about the topic in terms of climate, fossil fuels and biodiversity.

The participants also shared the environmental problems each city faces: dust storm in Beijing; transport congestion in Shanghai; waste management in Taipei and urban sprawl in Hong Kong. Besides, we introduced the concept of *charrette*, a decision making process that actively involves different stakeholders, to the participants.
